Summary

Junior Full-Stack Developer with 1+ year of experience building and deploying production internal business systems using Flask and MySQL. Experienced in digitalizing manual workflows into production web applications hosted on self-managed Synology NAS infrastructure. Delivered end-to-end solutions including development, deployment, automation, and user training.

Work Experience

Junior Programmer Excel Rim Sdn. Bhd.	Oct 2024 - Present Perai, Penang
- Developed and maintained production internal systems using Flask, MySQL, and Bootstrap, supporting role-based workflows, reporting, and business operations. - Managed deployment and maintenance on self-hosted Synology NAS infrastructure, ensuring system stability and availability. - Built Excel-to-database automation pipelines using Python and pandas, reducing manual data entry and improving accuracy. - Implemented automated email notification systems for workflow approvals and updates. - Transformed manual processes (Excel, paper, WhatsApp-based workflows) into centralized web applications with structured role-based approvals. - Conducted user training and prepared technical documentation to support system adoption.	
Protege RTW Penang International Airport	Feb 2024 - Oct 2024 Bayan Lepas, Penang
- Supported preventive maintenance scheduling and operational reporting for airport navigation systems in compliance with CAAM standards - Prepared and maintained maintenance reports for audits and operational review - Coordinated daily, monthly, and annual maintenance schedules with technical teams (TM and MAHB) - Provided IT and system support for reporting and access-related issues	

Key Projects

Sample Requisition System (May 2026)
Centralized requisition workflow system replacing Excel-based tracking. Implemented automated email notifications and approval flows. Improved request accuracy by 80% and reduced processing time.
Leave Application System (Mar 2026):
Multi-role HR leave management system with structured approval workflow and reporting modules. Reduced HR processing time by 70%.
Employee Movement Tracking System (Jan 2026):
QR-code based tracking system replacing manual WhatsApp logging. Added automated alerts and HR dashboard visibility. Reduced reporting errors by 80%.
Spare Part Request System (Jan 2025):
Digital workflow system replacing paper-based requests with approval flow and inventory tracking. Reduced approval time by 65%.

Education

Bachelor of Computer Science (Hons.) Universiti Teknologi MARA	Oct 2021 - Apr 2024 Kuala Terengganu, Terengganu
Diploma in Computer Science Universiti Teknologi MARA	Sept 2018 - Mar 2021 Merbok, Kedah

Skills

Programming Languages: Python, PHP, JavaScript
Backend: Flask, REST APIs
Frontend: HTML, CSS, Bootstrap
Database: MySQL
Data & Automation: pandas, Excel automation
Tools & Deployment: Git, VS Code, Synology NAS
Languages: Malay (native), English (proficient)
