

Nur Athirah Binti Mohd Subri

Full-Stack Developer

☎ (+60) 14-3611 436 | ✉ athirahnur2905@gmail.com | 🐙 GitHub | 🔗 LinkedIn | 📁 Portfolio

Summary

Full-stack Developer with hands-on experience designing, building, and deploying internal systems from scratch to production on Synology NAS infrastructure. Proven ability to digitalize manual workflows into scalable web-based solutions. Delivered end-to-end ownership across the full SDLC: requirement gathering, development, deployment, user training, and technical documentation.

Education

Bachelor of Computer Science (Hons.)	Oct 2021 - Apr 2024
Universiti Teknologi MARA	Kuala Terengganu, Terengganu
Diploma in Computer Science	Sept 2018 - Mar 2021
Universiti Teknologi MARA	Merbok, Kedah

Work Experience

Junior Programmer	Oct 2024 - Present
Excel Rim Sdn. Bhd.	Perai, Penang
- Collaborated with stakeholders to translate operational requirements into scalable internal web systems aligned with business workflows. - Participated in the full SDLC: requirement gathering, development, testing, deployment, user training, maintenance, and technical documentation. - Developed and maintained multiple full-stack systems using Python, Flask, MySQL, HTML, CSS, JavaScript, and Bootstrap. - Deployed and maintained all internal web systems on company Synology NAS, managing production environments end-to-end. - Automated Excel-to-database data ingestion pipelines using Python and pandas, reducing repetitive manual data entry and improving data accuracy. - Implemented email notification workflows, approval systems, reporting modules, and role-based process tracking for internal operations. - Prepared technical documentation including user manuals and presented training materials (slides) to support smooth system adoption across departments.	

Key Projects

Sample Requisition System	May 2026
- Built a cross-company sample requisition workflow between ERJ and ERM departments, replacing Excel-and-screenshot-based processes with centralized digital tracking. - Implemented automated email notifications for sample requests, delivery updates, modifications, and closure tracking — improving inter-department coordination.	
Leave Application System	Mar 2026
- Developed a multi-level digital leave management system replacing paper-based applications and manual HR recordkeeping. - Built workflows for leave application, on-behalf submission, verifier acknowledgment, and multi-level approval; also included HR modules for leave allocation, attachment tracking, and export reporting.	
Employee Movement Tracking System	Jan 2026
- Replaced manual WhatsApp group notifications with a QR-code-based movement tracking system covering pre-checkout, checkout, and check-in workflows. - Automated email alerts to section heads on employee scan events; built HR modules for movement history and reporting visibility.	

Spare Part Request System

Jan 2025

- Digitalized paper-based spare part requests, enabling online submissions from any section without visiting the store department.
- Built approval workflows with automated notifications and inventory management features including CRUD operations, stock verification, and daily export reporting.

Skills

Programming Languages: Python, PHP, JavaScript

Frameworks & Libraries: Flask, Bootstrap, pandas

Database: MySQL

Web & Technologies: HTML, CSS, REST APIs

Tools and Platforms: Git, VS Code, Synology NAS

Languages: Malay (native), English (proficient)
