GitHub | LinkedIn | Portfolio

Summary

Junior Full-Stack Developer with 1+ year of experience as the sole developer responsible for full end-to-end delivery of production internal systems — from requirement gathering and system design through development, deployment, and user training. Built and deployed 4 production systems using Flask and MySQL on self-managed Synology NAS infrastructure, transforming manual Excel, paper, and WhatsApp-based workflows into centralized web applications with structured role-based approvals.

Work Experience

Junior Programmer

Excel Rim Sdn. Bhd.

Oct 2024 - Present

Perai, Penang

- Designed and built multi-role web applications using Flask and MySQL, supporting role-based approval workflows and business operations across HR and operations departments for 200+ employees.
- Managed deployment and maintenance on self-hosted Synology NAS infrastructure; maintained legacy PHP systems alongside active development, ensuring 90% uptime across all production systems.
- Built Excel-to-database ETL pipelines using Python and pandas; implemented automated email notifications for multi-step approval workflows.
- Tested and validated REST API endpoints using Postman; conducted end-user training sessions and prepared technical documentation for system adoption.

Protege (TM Technology Services Sdn. Bhd.)

Penang International Airport

Feb 2024 - Oct 2024

Bayan Lepas, Penang

- Supported preventive maintenance scheduling and operational reporting for airport navigation systems in compliance with CAAM standards.
- Prepared and maintained maintenance reports for audits and operational review.
- Coordinated daily, monthly, and annual maintenance schedules with technical teams (TM and MAHB).
- Provided IT and system support for reporting and access-related issues.

Key Projects

Sample Requisition System (May 2026)

- Centralized requisition workflow system replacing Excel-based tracking. Implemented automated email notifications and approval flows. Improved request accuracy by 80% and reduced processing time.

Leave Application System (Mar 2026):

- Multi-role HR leave management system with structured approval workflow, role-based visibility, and reporting modules. Designed to support multiple department workflow configurations. Reduced HR processing time by 70%.

Employee Movement Tracking System (Jan 2026):

- QR-code based movement tracking system replacing manual WhatsApp logging. Added automated alerts and HR dashboard visibility. Reduced reporting errors by 80%.

Spare Part Request System (Jan 2025):

- Digital approval workflow replacing paper-based requests. Integrated live stock lookup via MSSQL and built admin inventory dashboard. Reduced approval time by 65%.

Education

Bachelor of Computer Science (Hons.)

Universiti Teknologi MARA

Oct 2021 - Apr 2024

Kuala Terengganu, Terengganu

Diploma in Computer Science

Universiti Teknologi MARA

Sept 2018 - Mar 2021

Merbok, Kedah

Skills

Programming Languages: Python, PHP, JavaScript

Backend: Flask, REST APIs

Frontend: HTML, CSS, Bootstrap

Database: MySQL

Data & Automation: pandas, ETL pipelines, Excel automation

Tools & Deployment: Git, VS Code, Synology NAS, Postman

Languages: Malay (native), English (proficient)
